Hi,

I have CentOS 4.4 VPS (Virtuozzo) . I use your kernel and install it from YUM .

yum install ovzkernel-smp

but when I restart my server my server crash and VPS didnt load maybe Kernel crash (.
I contact Datacenter to fix the problem but they told me they dont know how to fix it and they can recreate VPS.

But I will lost all my data. can you please tell me how to remove kernel and recompile the correct Kernel. (

Server is down right now PLEASE PLEASE help me.

I dont have any SSH access and Virtuozzo didnt load !

Only Datacenter can fix it. !

Please help me...

and tell me how can I remove your program !

Thanks a lot
