I want to get a temperature monitor running in an openvz-instance but i'm struggling with the devices - i've connected /dev/ttyS0 through with the following command
myhost:/# vzctl set $veid --devnodes port:rw --save

but when i run the control utility i get a segmentation fault, strace shows the following:

```
myinstance:/srv/klimalogger/bin# strace ./dump_tfa /dev/ttyS0 123
execve("./dump_tfa", ["./dump_tfa", "/dev/ttyS0", "123"], [/* 13 vars */]) = 0
[ Process PID=9593 runs in 32 bit mode. ]
