Quote:Also, I noticed you mentioned that the upload is not being limited, but it is. If someone try to download something FROM the VPS, he will be limited, if he tries to upload something TO the VPS, he will be limited,

If somebody tries to download smth from VPS (it is uploading for VPS), IP packet goes something like that:

```
Node,       forward
that    <-----------  Hardware      <---------------   VPS
requests     ^       Node With VPS
           |
           |
           |
      hunk 2 works
```

So you are right.
In my previous post I meant that if upload goes to HN with VPS, then there is no forwarding - so no limiting and hunk 3 helps in such situation.

Anyway this isn't your case... And it's really strange why ddos tools aren't limited!..
