Hi all,

I am glad to announce the first beta release of 'Proxmox Virtual Environment' - an open source virtualization platform for the enterprise.

The main features are:

- All code is GPL
- OpenVZ and KVM support
- bare metal installer (debian etch 64)
- Backup/restore with vzdump/LVM2
- web based management
- integrated virtual appliance download (include certified appliances)
- configuration cluster

You can find more information at http://pve.proxmox.com

We encourage anyone interested to download and test.
The CD image is available at: http://pve.proxmox.com/wiki/Downloads

Let us know what you think!

Best regards,

Dietmar
