Has anyone had any luck getting the berkeley automounter to run inside a ve (am-utils / amd) ?? It's running fine on my rather old server (using kernel 2.6.19.4)... But in a VPS environment (host os 2.6.18 test 15.1) I'm getting some 'staled NFS' errors from amd. NFS is ofcourse enabled for the VPS (NFS / autofs is basically working, just not amd)... Am I missing something here?
