Hi,

I downloaded the new kernel kernel-smp-2.6.18-ovz028stab021.1.x86_64.rpm and I try to install it on my fc6 and I have this strange error:

rpm -ivh kernel-smp-2.6.18-ovz028stab021.1.x86_64.rpm
Preparing... ########################################### [100%]
package kernel-smp-2.6.18-ovz028test018.1 (which is newer than kernel-smp-2.6.18-ovz028stab021.1) is already installed

uname -a
Linux sci-cremona.provincia.cr.lan 2.6.18-ovz028test018.1-smp #1 SMP Tue Feb 27 16:23:13 MSK 2007 x86_64 x86_64 x86_64 GNU/Linux

what does it means??
