Hello,

Don't be so severe with OpenVZ community . We try to help all persons as soon as possible, but occasionally time presure is rather great. Moreover your initial post was on friday, and most of people don't work on weekends .

As concerns the problem. You should increase pivvmpages limit. Privvmpages is not a RAM. It is a limit for allocated memory! Most of applications allocate huge amounts of memory but use only 20% of it. You can get more information about it at
http://wiki.openvz.org/UBC_secondary_parameters

HTH,
Vasily.
