Hi,

I tried to install the tool zaptel inside a VPS. I did make and got the following error:

grep: /include/linux/autoconf.h: No such file or directory
grep: /include/linux/autoconf.h: No such file or directory
make[1]: Entering directory `/root/zaptel-1.4.4'
/bin/sh: cmp: command not found
You do not appear to have the sources for the 2.6.18-8.1.4.el5.028stab035.1 kernel installed.
make[1]: *** [modules] Error 1
make[1]: Leaving directory `/root/zaptel-1.4.4'
make: *** [all] Error 2

It seems like the kernel sources are missing.

How can I use the kernel sources inside a VPS.

My host is CentOS 5 and guest is CentOS4 minimal.

Rgs,
schogge
