Hello Gents,

i'm new here and like to ask where are the limits of VEs on a host. I try to start 100 on an 16GB dual quad core Dell2950. I build the .conf with vzsplit -n100 but i get at max 49 VEs running. I guess that kmemsize is my problem. How much kemsize is usefull for a verry small VE?

thx
yahbluez
