HAllo,

eine Anfängerfrage
Debian aptitude upgrade schlägt folgendes vor:
Quote:aptitude:Updates möglich
Reading package lists...
Building dependency tree...
Reading extended state information...
Initializing package states...
Reading task descriptions...
Building tag database...
The following packages have been kept back:
  linux-image-2.6-686
The following packages will be upgraded:
  debian-archive-keyring debootstrap initramfs-tools libc6 libc6-i686
  locales lsb-base nano
8 packages upgraded, 0 newly installed, 0 to remove and 1 not upgraded.
Need to get 10.5MB of archives. After unpacking 571kB will be freed.
Would download/install/remove packages.
Das ist OK, oder - der OpenVz Kernel schein ja zu bleiben, das debootstrap Paket ist für OpenVz auch OK, oder?

Sorry für die Anfängerfrage, aber ich habe ein wenig Angst, mir mein OpenVz System zu schiessen.

DAnke Micho
