Hi,

Please someone help me

I am facing below problem

Installed OpenVz in one of our server.

1. Downloaded rpm for kernel, vzpkg, vzquota etc all are working fine.
But when installing

rpm -ivh vztmpl-fedora-core-4-2.0-2.i386.rpm

Says it is already installed

But when we are giving rpm -ql or rpm -qa it shows it is not installed.

2. Giving vzpkgcache command getting below error

ERROR: RPM python path not found: /usr/share/vzpkgtools/vzrpm44/lib/python/site-packages
