Subject: Redirect traffic from a specific hostame to a specific VE ?

Hello, I am new to using openVZ and need some help already

I have installed openVZ on a CentOS 5.2 host machine and created a CentOS VE.

I have a dynamic DNS domain name from dyndns.org, is there any way that I can route that hostname to the specific VE?

I set the FQDN and hostname to that of the dyndns.org domain name but when I try to connect to SSH on that FQDN it will login to the host system and not the specific VE :S

I have been searching Google about iptables but I am not sure it they work with hostnames :S

To explain things easier :

This is what I am trying to do :

[HOST BOX : 192.168.1.100]
- |_vm1 (192.168.1.101)_| <------ host1.dyndns.org
- |_vm2 (192.168.1.102)_| <------ host2.dyndns.org
- |_vm3 (192.168.1.103)_| <------ host3.dyndns.org
- |_vm4 (192.168.1.104)_| <------ host4.dyndns.org
- |_vm5 (192.168.1.105)_| <------ host5.dyndns.org

This is what happens :

|------ host1.dyndns.org
|------ host2.dyndns.org
|------ host3.dyndns.org
|------ host4.dyndns.org
|------ host5.dyndns.org
|
\
.V
[HOST BOX : 192.168.1.100]
- |_vm1 (192.168.1.101)_|
- |_vm2 (192.168.1.102)_|
- |_vm3 (192.168.1.103)_|
- |_vm4 (192.168.1.104)_|
- |_vm5 (192.168.1.105)_|

host1.dyndns.org though host5.dyndns.org all have the same external ip of the host (x.x.x.x).

I was wondering if there was a way for the host machine to redirect traffic to the appropriate VE's according to the hostname?

Thanks for any help!! I am very confused about this .
