Hi,

I'm trying to install kernel-smp-2.6.18-ovz028stab047.1.i686.rpm on a CentOS 4 system and it gives the following:

[root@server openvz]# rpm -ivh kernel-smp-2.6.18-ovz028stab047.1.i686.rpm
warning: kernel-smp-2.6.18-ovz028stab047.1.i686.rpm: V3 DSA signature: NOKEY, key ID a7a1d4b6
Preparing... ########################################### [100%]
1:kernel-smp ########################################### [100%]
WARNING: No module 3w-9xxx found for kernel 2.6.18-ovz028stab047.1-smp, continuing anyway
WARNING: No module ata_piix found for kernel 2.6.18-ovz028stab047.1-smp, continuing anyway

I have the following controller on that server: 3ware 9650SE-2LP.

Should I just disconsider the message above or should I try another kernel or should I get a vanilla kernel, patch it and load those modules?

Thanks in advance,

Eugenio Pacheco
