Subject: Asterisk conference and DAHDI (SOLVED)

Hello Folks,

I am running an Asterisk based distro called Elastix in a VE. The Music on Hold works but I tried for hours to get the conference working without success. I created a conference number 3000 with PIN of 1234. I dial into the conference and I am prompted for the PIN but when I enter the PIN I get that is not a valid conference PIN number.

The attached log shows:
"app_meetme.c: Unable to open pseudo device"

The problem is that Elastix has Asterisk 1.4.23 and is using DAHDI which is due to replace Ztdummy so when I followed this:

http://wiki.openvz.org/Asterisk_from_source

it didn't help much.

I even downloaded the Asterisk 1.4.24 and recompiled Asterisk but that didn't help either. Please see the attached log.

The CLI shows that the DAHDI modules are loaded:

```
el*CLI> module reload chan_dahdi.so
    -- Reloading module 'chan_dahdi.so' (DAHDI Telephony w/PRI)
  == Parsing '/etc/asterisk/chan_dahdi.conf': Found
  == Parsing '/etc/asterisk/dahdi-channels.conf': Found
  == Parsing '/etc/asterisk/chan_dahdi_additional.conf': Found
  == Parsing '/etc/asterisk/users.conf': Found
el*CLI>
```

Any ideas please?

regards,

Kabong2008
