Any ever had a problem when you try and do vzctl enter ID says enter failed?

I had a customer who it happened twice and says he did nothing out of the ordinary and i got it to happen to me today.

Restarting the VE doesn't help either.

I'll put my config below to see if that matters much.

I believe that should be 128 meg minimum and 256 meg burst.

Only thing i did was trying to check out this one mailserver setup program
