I am following the PDF User Guide and have set up for example VPSID 101. I have set --diskspace --diskinodes, and --quotatime. When I perform:

```
# vzctl exec 101 df
```

```
Filesystem      1K-blocks    Used Available Use% Mounted on  
[root@redhat /]#
```

If I perform:

```
# df /vz
```

```
Filesystem      1K-blocks    Used Available Use% Mounted on  
/dev/hda3       74714332 2161532 68757444  4% /
```

If I do df inside VPS 101 it is empty also. I have tried restarting VPS 101 with the same results.

What am I missing or doing wrong?
