I am following the PDF User Guide and have set up for example VPSID 101. I have set --diskspace --diskinodes, and --quotatime. When I perform:

```
# vzctl exec 101 df
```

Filesystem	1K-blocks	Used	Available	Use%	Mounted on
[root@redhat /]#					

If I perform:

```
# df /vz
```

Filesystem	1K-blocks	Used	Available	Use%	Mounted on
/dev/hda3	74714332	2161532	68757444	4%	/

If I do df inside VPS 101 it is empty also. I have tried restarting VPS 101 with the same results.

What am I missing or doing wrong?
