VirtualComplete is a new commercial OpenVZ panel.

It offers tons of excellent features for providing virtual servers such as a built-in support system and a secure hosted environment.

Visit www.virtualcomplete.com for information and screenshots. We will offer free licensing to open-source developers (with proof).

Expected Release Date: Friday, June 12th.

Features include:

Multiple VPS Management
Remote reboot
Reinstall OS
Multi-Linux profiles (boot multiple distributions under one VPS)
High Availability Cluster (setup a grid for high-uptime services)
Root Password Control
Server Statistics & Graphs
Backup & Restore (Automated backups under Advanced)
SSH Access and Virtual Console when SSH is down
File Manager
VPSGuard Security (Install/Configure Firewall & BFD)
View Running Processes and Network Connections
Install/Update Software
View System Logs
Enable Devices (VPN/NFS)
Disk Tracker (track disk hogging files)
