Hello everybody,

This post to warn users to be carefull using fza kernel 2.6.18-12-fza-amd64 on debian 64bit installation.

I've encountered huge data corruption with it (bug report here : http://bugzilla.openvz.org/show_bug.cgi?id=911).

Maybe it's the combination of fza kernel + hardware that leads to this data corruption, but it's better to be warned about it.
