Hi, running Dual Opteron 2210 with 4 x seagate sata drives in raid 10 (areca ARC-1210 raid card), CentOS 5 64-bit

Got a random kernel panic all of a sudden while the server (see attachment) while was running fine with little load, I have a feeling it's the raid card, let me know what you guys think,

Linux version 2.6.18-8.1.8.el5.028stab039.1

Thanks in advance
