Subject: Slow upload speed on VE

I just installed OpenVZ on a new server following the install guide to the letter but I find that the upload speed is only about 2Kbps it is a 10Mb line and the node is able to upload at 1.2Mbps I have set memory and hard drive quotas but no network limits.

The host machine is running centos 5 and the VE is fedora core 4. I have given it a separate IP address, hostname and name server all of which have been tested.

I am unsure as to what to do next and was hoping you could advise.

Thank you
