Subject: not starting on boot (onboot="yes" in conf files)

Hi,

I have a particular hardware node that has stopped booting ve's on reboot.

All the ve's have :

onboot="yes"

set

The server does start the openvz service via /etc/rc.d/init.d as far as I can tell.

If I reboot the node, vzlist shows something similar to "no containers found" (I don't recall the exact wording).

If I start them manually everything works fine.

Any ideas? Thanks in advance.
