Maby someone has tried...? All distos in virtual enviroment use the same kernel.
So if I just make a tar.gz of "/" dir some-cool-distro.tar.gz, move it to /vz/template/cache/ ant try to make:
vzctl create 666 --ostemplate some-cool-distro --config vps.basic
would that work? Could I use this stuff like vps is was created from templates?
