Hi all, I'm a new member, I have installed Openvz and have problem with networking as follow:

My Hardware node has one NIC call eth0, I assigned IP: 10.x.x.10/24, gateway: 10.x.x.1 this ip can access to the internet.

I created 2 VPS with hostname call are node1 and node2

In node1, I assigned IP: 192.168.1.2
In node2, I assigned IP: 192.168.1.3

When I start VPS have this message:

arpsend: 192.168.1.2 is detected on another computer : 00:00:0c:07:ac:06
vps-net_add WARNING: arpsend -c 1 -w 1 -D -e 192.168.1.2 eth0 FAILED

the same problem on node2

I access to node1 and ping to 10.x.x.10 is ok
but i cannot access to 10.x.x.1 and to the internet.

Any body, who already met this error? May you give me how to config to node1 or node2 can access to the internet?

Regards,
John Nguyen
