Subject: vzquota taking 1.2GB of actual memory upon startup

I have two hosts and one host when I start the only VE which 128MB of RAM it won't start and vzquota starts and takes 1.2gb of RAM.

Then I get this error when manually trying to start the VE:

Received signal: 9 in /usr/sbin/vzquota
Received signal: 9 in /usr/sbin/vzquota

Does anyone have an idea why it does this?
