Subject: openvz and ftp connection tracking for non-default ports

Hello,

I've got a hylafax install inside an openvz container. Now I'd like to run
a firewall as well.

I load the firewall modules for ftp connection tracking on the host machine
and with the following line in the containers config file:

IPTABLES="ipt_REJECT ipt_tos ipt_TOS ipt_LOG ip_conntrack ipt_limit
ipt_multiport iptable_filter iptable_mangle ipt_TCPMSS ipt_tcpmss ipt_ttl
ipt_length ipt_state iptable_nat ip_nat_ftp ip_conntrack_ftp ipt_conntrack
ip_tables"

Now my Problem is that it works for Port 21 only and I'm unable to set the
parameters for the module.

Is there a way to set the parameters for the ftp connection tracking module
like "ports=21,4559"?
With best regards

David Oppermann
