Hello,

I would like to use openvz with 2.6.24 under Ubuntu Hardy i386 with following kernel:
linux-headers-2.6.24-19-openvz_2.6.24-19.33ubuntu4_i386.deb

root@demolut:~# vzctl enter 200
entered into VE 200
root@freeswitch-02:/# cat /proc/net/tcp
cat: /proc/net/tcp: Input/output error

Sometimes I got:

root@demolut:~# vzctl enter 200
entered into VE 200
root@freeswitch-02:/# cat /proc/net/tcp
  sl local_address rem_address   st tx_queue rx_queue tr tm->when retrnsmt   uid timeout inode

root@freeswitch-02:/#

The guest opsys is ubuntu hardy, but I checked with slackware and debian too.

vzctl --version
vzctl version 3.0.22

If I exec an sshd in VM, that will run, I can connect to it from outside, but netstat doesn't shows in output.

Have you got any idea?
Regards,
Puspok
