Subject: Inconsistent free space after resizing ve

Hi!
I resized a ve which was originally set at 1GB, via:
$ sudo vzctl set 101 --diskspace 2G:2G --save
$ sudo vzctl set 101 --diskinodes 1000000:1200000 --save
$ sudo vzctl set 101 --quotatime 600 --save

But from within the ve the allocated space is reported as
$ df -h

F.system	Size	Used	Avail.	Usage%	Mounted
simfs	2.0G	469M	327M	59%	/
tmpfs	247M	0	247M	0%	/lib/init/rw
tmpfs	247M	0	247M	0%	/dev/shm

$ df -i

F.system	Inodes	Used	Free	Usage%	Mounted
simfs	1000000	21623	978377	3%	/
tmpfs	63117	2	63115	1%	/lib/init/rw
tmpfs	63117	1	63116	1%	/dev/shm

There's plenty of real space in my vz partition. Also no quotas have been set for this ve.
