Subject: vps could not start when quota is on

Hello,

Before yesterday "disk quota" value in "vz.conf" set to "yes" and all vps work good!
But today we cant start any vps and we have "vzquota : (error) can't lock quota file, some quota operations are performing for id 380" error.
So we change "disk quota" value in "vz.conf" to "no" and all vps ok now.
But vps can use unlimited hdd because disk quota is off now!
Do you have any idea for resolve this issue?

Thanks
