Subject: Single IP not reachable from within VE

I have a *VERY* weird issue, I hope you guys can help me.

I have 8 HN's. All have 1 public IP (85.113.250.x) and an internal LAN IP (10.0.250.x). Internal LAN and public LAN are on seperate switches.

This works well, I can ping & connect to every IP. All my VE's also have the same setup, one public an one private IP. from within the VE's I can ping all other private IP's. Except for one. This private IP (10.0.250.27) is the internal LAN IP of the HN and can be pinged from the HN's, it is online, I use it for SSH. But I can't even ping from within the VE's. I can ping other 10.0.250.x IP's, but not this one.

I added an extra private IP to the HN, but safe thing, can't ping from within the VE's. This extra IP can be pinged from HN's. Iptables is disabled, selinux disabled. Any suggestions?
