Hi all,

I have troubles with quagga and FC5 (kernel: 2.6.15-1.2054_FC5.026test006) and RHEL4 ( CentOS 4.4, kernel: 2.6.9-023stab016.2). Quagga routing daemon (zebra) can not insert routes into kernel. Error is:

2006/09/13 14:57:17 ZEBRA: netlink_route_multipath() (single hop): RTM_NEWROUTE 10.0.1.0/24, type IPv4 nexthop
2006/09/13 14:57:17 ZEBRA: netlink_route_multipath() (single hop): nexthop via 192.168.11.23 if 4
2006/09/13 14:57:17 ZEBRA: netlink_talk: netlink-cmd type RTM_NEWROUTE(24), seq=6
2006/09/13 14:57:17 ZEBRA: netlink-cmd error: Operation not permitted, type=RTM_NEWROUTE(24), seq=6, pid=0

Ospf and bgp daemons works fine. Selinux is disabled. Everything work fine, except quagga. Is there a solution for this problem?

Thank You.
