Subject: NFS mount options

I trying to mount an NFS filesystem in a container.
mount -t nfs -o rw,hard,intr,proto=tcp,rsize=32768,wsize=32768,nfsvers=3

But the actual mount reads:
> mount
type nfs rw,vers=3,rsize=8192,wsize=8192,hard,intr,proto=tcp,timeo=60
0,retrans=2,sec=sys,addr=

What am I missing?
