Hello ,

I'm working with Openvz & hypervm on Centos 5.2 x86_x64 HN .

I have little Problem on Vps Users . when i restart network in Ve see this error message :

```
[root@roza ~]# vzctl enter 140
entered into CT 140
[root@pardis /]# service network restart
Shutting down interface venet0:                            [  OK  ]
Shutting down loopback interface:                          [  OK  ]
Bringing up loopback interface:                            [  OK  ]
Bringing up interface venet0:  SIOCADDRT: Network is unreachable
SIOCADDRT: Network is unreachable
                                                           [  OK  ]
[root@pardis /]#
```

all thing is fine and Ve can ping outside :

```
[root@pardis /]# ping google.com
PING google.com (209.85.171.100) 56(84) bytes of data.
64 bytes from cg-in-f100.google.com (209.85.171.100): icmp_seq=1 ttl=243 time=54.4 ms
64 bytes from cg-in-f100.google.com (209.85.171.100): icmp_seq=2 ttl=243 time=54.1 ms

[1]+  Stopped                 ping google.com
[root@pardis /]#
```

but , Venet0 Ip adress is 127.0.0.1 and on the some of softwares like BIND (dns server) , get error :

rndc: connect failed: 127.0.0.1#953: connection refused

what's the problem ? where is the problem ?

Thanks
