Subject: Private IPs not working

When trying to add a Private IP, we get an error kicked out:

[root@openvz /vz]# vzctl set 9998 --save --ipadd 10.0.1.10
Adding IP address(es): 10.0.1.10
arpsend: 10.0.1.10 is detected on another computer : 00:00:0c:07:ac:00
vps-net_add WARNING: arpsend -c 1 -w 1 -D -e 10.0.1.10 eth0 FAILED

I know for a fact that IP is not anywhere on our network. This happens when we use any 10.0x or 192.168.x IPs. I think this may be a feature of Virtozzo to prevent setting up Private VE's, but I'm not sure.

I check the VE itself, the ip is bound and it's up, but wont ping out.

Any ideas?

Thanks,
