
Subject: Prevent unmount inside VE

Hi

I run several VE`s and mount some Directories outside the VE via mount --bind to access them. Inside the VE the Root could unmount this.

Example:

```
root@hn:/# mount --bind /mnt/ /vz/root/100/mnt/
root@hn:/# vzctl enter 100
root@ve:/# cat /proc/mounts
simfs / simfs rw 0 0
ext3 /mnt ext3 rw,data=ordered 0 0
root@ve:/# umount /mnt/    <---- Works
root@ve:/# exit
root@hn:/# mount
/dev/sda1 on / type ext3 (rw,errors=remount-ro)
/mnt on /var/lib/vz/root/100/mnt type none (rw,bind) <-- This Information is not updated.
```

How could I prevent this ?
