Subject: Ram and second hdd

I have been looking at openvz and it sounds really interesting.
I have been reading some manuals and doing a bit of searching but I can't find answers to the following questions...
When adding hdd's, how should they be mounted? Under /vz2 /vz3 or something?
And about big ram 4gb+
Would I have to be running a 64bit host and 64bit templates? Or is there some modifications so I could use 32bit host and templates?

Thanks.
