Subject: VMWare on same host as OpenVZ

Total newbie here.

I know this must sound like a stupid question, but we are a small shop here and while we have mostly linux servers to virtualize we have a need for some Windows VMs as well and really want to have it all on one box.

I'd prefer to run VMWare Workstation as these Windows vms are have lots of 2d graphics going on.

Is this possible? Technically, OpenVZ isn't a hypervisor so it doesn't require the CPU virtualization capabilities does it?
