Subject: OpenVZ on multiple hard drives

I'm trying to run multiple OpenVZ VPS's on a single machine running SolusVM.

I have 8 hard disk drives installed on this machine. What I want to do is, I'd like the first VPS to use the first HDD, the second VPS to use the first HDD again and when it's full, I'd like the 3rd VPS to go on the second HDD and so on.

Is there a way to do this automatically?
