Hello Support,
Just wanna ask if I can migrate thru control panel of Openvz vtonf the vps from virtuozzo? Just like Virtuozzo that we can migrate it from control pannel.And also is there a way that I can migrate the virtuozzo container to openvz without stopping the service of the VPS?
Because in this link
http://blog.tuxhelp.com/?cat=1.
I must stop first the VPS.
Also when I tried to migrate it it didn't work. Maybe I don't much understand the rsync command.I change some of the command like the path in the that tutorial because the rsync command is not running.

YOur help is a big help.Thank you.
