Hello,

is it possible to add an ip tunnel endpoint to an ve?

When i run a tcpdump inside the ve i see the ip packages.

15:42:33.015062 IP 192.168.17.1 > 192.168.17.21: IP 192.168.19.17.54558 > 192.168.17.20.www: S 229973045:229973045(0) win 5840 <mss 1380,sackOK,timestamp 1449385987 0,nop,wscale 6> (ipip-proto-4)

But when i try to add the tunnel endpoint (inside the ve) i get the following error message:

ve01# ip tunnel add tunl0 mode ipip remote 192.168.17.20 local 192.168.17.21 dev venet0
ioctl: No such device

The ipip module is loaded on the hn.

```
hn01:~# lsmod |grep ipip
ipip                   13572  0
tunnel4                 7824  1 ipip
```

Any ideas?

Thanks

jan
