Subject: How to set mtu in a container

Hi to all,

This is my first post, in this forum, so please be lenient.

I have to change the mtu setting in a container and i was wondering if this parameter can be set in xxx.conf file, so that the setting can be remembered upon restart...
(I'm using v3.0.23 of vzctl)

I've read the docs/searched the web, but i couldn't find any indication on how to do it... Any ideas?

Thanks in advance,
Theodoros

ps. I suppose i could write a script, that would be executed upon starting the container, but if there is a parameter in the .conf file, i would prefer using it, because it is more 'clear'
