Hi,
I'm looking for someone with good openvz _network_ skills for paid help. I figured that I can not do network stuff by my own. So I'm looking for help in exchange for money.

I'm familiar with openvz. Dealing with container, installing Linux distro, setting up a LAMP system and so on is no problem. But as soon as things like 'routing', 'venet', 'veth', 'gateway', 'subnets', 'bridging', 'broadcasts' and so on is required I fail.

To get an idea about the job please read my other msg:
http://forum.openvz.org/index.php?t=tree&goto=38633& #msg_38633
(unlike my 3rd msg. there the system does not work as expected yet)

Setting up openvz containers (=VEs) is no problem for me. But making the VEs talking to each other, 'routing' and such, I can't handle. The Linux distro in HN and all VEs is CentOs 5.x 64 bit. The latest openvz kernel is installed.

If interested please get in touch with me that we can talk about details. Thank you.
