Hi,

The just announced Ubuntu 11.04 beta template (i386) got a wrong sources.list, line 4 misses 'deb'
http://download.openvz.org/template/precreated/beta/ubuntu-1 1.04-x86.tar.gz

> cat /etc/apt/sources.list

_
deb http://archive.ubuntu.com/ubuntu natty main restricted universe
deb http://archive.ubuntu.com/ubuntu natty-updates main restricted universe
deb http://archive.ubuntu.com/ubuntu natty-security main restricted universe
http://archive.canonical.com/ubuntu natty partner

_

Should be:

_
deb http://archive.ubuntu.com/ubuntu natty main restricted universe
deb http://archive.ubuntu.com/ubuntu natty-updates main restricted universe
deb http://archive.ubuntu.com/ubuntu natty-security main restricted universe
deb http://archive.canonical.com/ubuntu natty partner

_

The amd64 version just misses the partner repo. I assume it makes sense to add it also.

Best Regards,

Martin
