Hi, i am a proud owner of a server, what runs proxmox VE 2.2 (+ovz of course)

Today i want to do one backup 'process', but it fails.

Here is the log:

INFO: starting new backup job: vzdump 102 --remove 0 --mode stop --compress gzip --storage backup --node ns353127
INFO: Starting Backup of VM 102 (openvz)
INFO: CTID 102 exist mounted running
INFO: status = running
ERROR: Backup of VM 102 failed - can't lock VM 102
INFO: Backup job finished with errors
TASK ERROR: job errors

- Yes, i have enough place.
- Yes, my lock folder is empty.
- Yes, the backup is enabled on the storage node.

Has anyone encountered this problem?

Gabor
