Subject: 1 server 2 drives

I just installed OpenVZ on a dedi I have. The server has 2 1.5TB hard drives. Will openvz utilize the second drive when allocating space for VPS?

My current setup is SolusVM Master on a VPS the Solus Slave on the dedicated server. WHMCS for payment and all tied together for auto vps creation.

The second drive is not visible yet as I need to partition and format it still. How should I do this to make it available as space for VPS creation?

would I want only one partition on /dev/sdb? (sdb1) File system ext3?

What would the mount point be?

Thanks
