
Subject: VPS -> HN having problems communicating

Hi there,

I'm sure it's something on my side -- however, I have the weirdest problem.

I have a VPS that sends commands to all the other HN's across the network. None of the HN's have problems accepting the command except the HN that the VPS is on.

It works maybe 5/10 of the time, other times it will just sit there. So I had the same script put on another VPS not on the same HN and it works fine.

So it makes me believe there's some kind of communication problem between the VPS's and the HN it's on. Has anyone heard of such a problem?
