Subject: How to reinstall networking

I have a container that i migrated from a node to another. I can ssh to it and it pings fine. However, it doesn't resolve domains at all, nor does it ping to an IP address. As if there is no outbound connectivity.

So what i am thinking to do is to remove the networking and reinstall it (hopefully to default state)...

Is there a way to remove and reinstall an openvz container's networking system?

Thanks
