Someone please help i have some serious issue with openvz vm network connectivty.

whenever i created new VM its reachable till its not rebooted after the reboot of VM is not come in network but its pinging from host machine not outside of the world. if i assigne new IP to VM then that IP also rechable till VM not rebooted.
I tried all of my ways I have a serious concern please suggest some of ideas why it happens i dont have any network problem with my host machine issue is only with openvz VM's.
