Hi

I have got a bug written on Debian vzquota package.
See http://bugs.debian.org/377414 for full information.
We have some disagreement on the severity of it but that is
not important for you.

You can see from here
http://buildd.debian.org/build.php?pkg=vzquota
that it build fine on most archivtectures but not powerpc and
s390 because of a warning. I do not know why it treat warnings
as (I have not looked that the build options that much) errors but
you may know that.

Can you please take a look on these build logs and create a patch
for that?

Regards,

// Ola
