My cPanel performs such calls on my container:
/sbin/modprobe ip_tables

And last time it returns:
/sbin/modprobe ip_tables
FATAL: Could not load /lib/modules/2.6.18-308.8.2.el5.028stab101.1/modules.dep: No such file or directory

My cPanel freezes running such commands forlong period.
I'm not sure is it cPanel's or openVZ problem ?
Hot to fix this ?

p.s. googling & yum update & reboot didn't help
